Long term consultation.

South West Water is launching a public consultation on proposed plans to evolve its water resources so that future generations can continue to depend on them.

The water company's Draft Water Resources Management Plan, sets out long-term plans to maintain secure and sustainable water supplies to customers in the future, whilst protecting and enhancing the environment.

The consultation is now open and will close on Tuesday 9 May 2023.

## Overview.

Included in the plan, which covers South West Water's approach and vision for water resources for the next 25 years, are proposals to increase the recycling of water, nurture rivers and reservoirs, protect the wildlife that depends on water habitats, and ensure a diversified mix of water resources.

There are also plans to protect household and business customers from the impacts of climate change and increasing hot and dry summers, while ensuring a resilient infrastructure that can support tourism and the long-term economic health of the region.
